URATE OXIDASE

The present application claims benefit of U.S. Provisional Application No. 60/095,489, filed August 6, 1998, the entire contents of which is incorporated herein by reference.

The invention disclosed herein was made with U.S. Government support under Grant No. DK48529, awarded by the National Institutes of Health. The Government has certian rights in the invention.

The present invention relates, in general, to urate oxidase (uricase) proteins and nucleic acid molecules encoding same. In particular, the invention relates to uricase proteins which are particularly useful as, for example, intermediates for making improved modified uricase proteins with reduced immunogenicity and increased bioavailability. The preferred modified uricase proteins of the present invention include the uricase proteins covalently bound to poly(ethylene glycols) or poly(ethylene oxides). The present invention provides, therefore, uricase proteins, antibodies which specifically bind with the proteins, nucleic acid molecules enoding the uricase proteins and useful fragments thereof, vectors containing the nucleic acid molecules, host cells containing the vectors and methods of using and making the uricase proteins and nucleic acid molecules.

Background Gout is the most common inflammatory joint disease in men over age 40

(Roubenoff 1990). Painful gouty arthritis occurs when an elevated blood level of uric acid (hyperuricemia) leads to the episodic formation of microscopic crystals of monosodium urate monohydrate in joints. Over time, chronic hyperuricemia can also result in destructive crystalline urate deposits (tophi) around joints, in soft tissues, and in some organs (Hershfield 1996). Uric acid has limited solubility in urine and when overexcreted (hyperuricosuria) can cause kidney stones (uricolithiasis). In patients with certain malignancies, particularly leukemia and lymphoma, marked hyperuricemia and hyperuricosuria (due to enhanced tumor cell turnover and lysis during chemotherapy) pose a serious risk of acute, obstructive renal failure (Sandberg et al. 1956; Gold and

Fritz 1957; Cohen et al. 1980; Jones et al. 1990). Severe hyperuricemia and gout are

associated with renal dysfunction from various causes, including cyclosporine therapy to
